Department of S.Y. B. Tech [AIDS]

Assignment No: 08

SUBJECT: Java Programming

Name: Shravan Kalbhor
Class: SY BTech (AIDS)
Section: A
Roll Number: 26026

Title / Problem Statement :

Develop an application that empowers e-commerce businesses to gain deeper insights from customer reviews by extracting key textual features: word and character counts, normalized text (uppercase/lowercase), reversed text for inspection, and a palindrome flag to highlight unique review structures.

Input :

```java
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter customer review: ");
        String review = sc.nextLine();

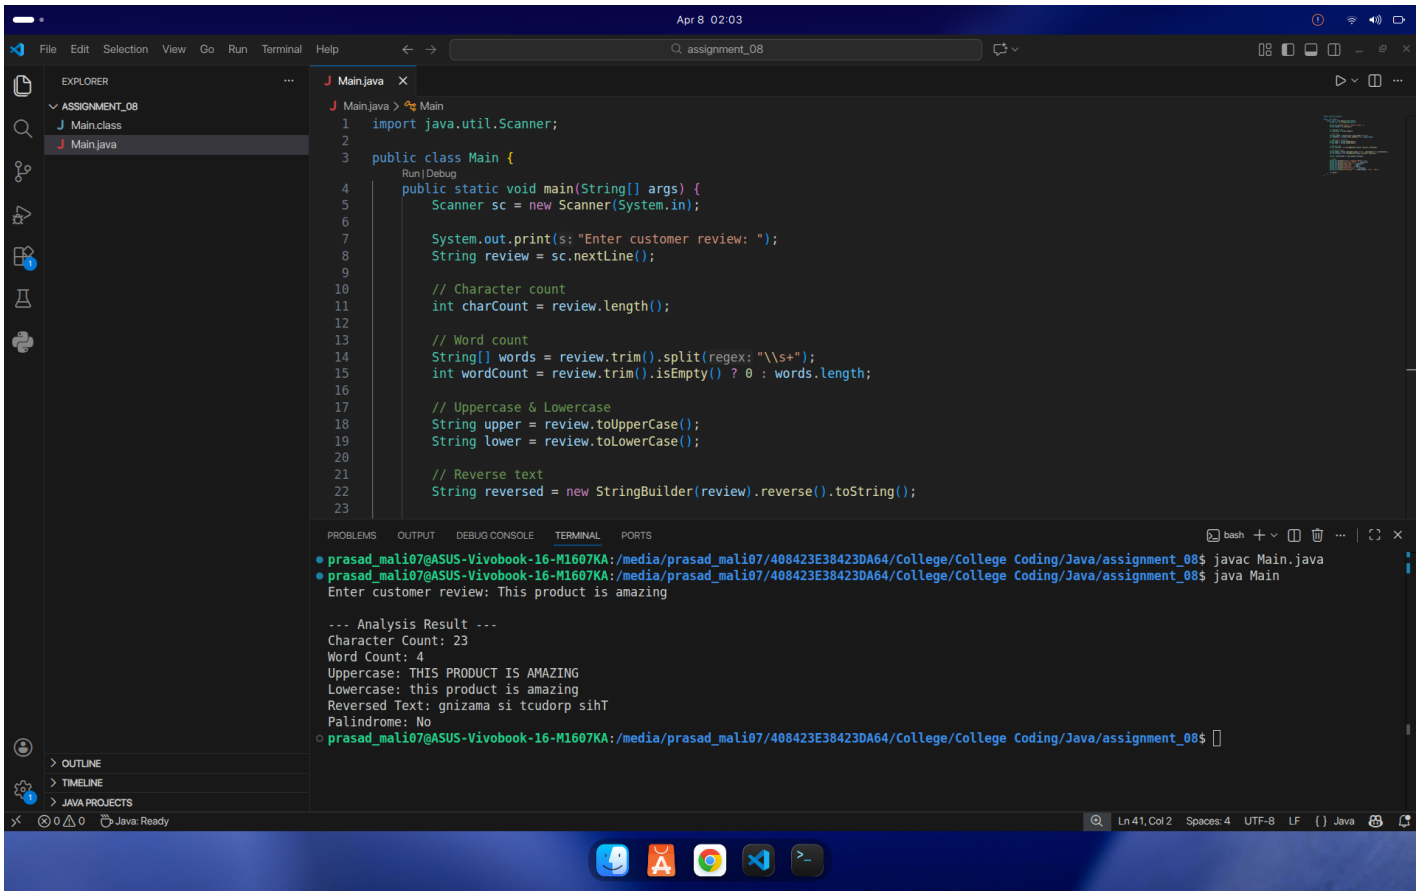
        // Character count
        int charCount = review.length();

        // Word count
        String[] words = review.trim().split("\\s+");
        int wordCount = review.trim().isEmpty() ? 0 : words.length;

        // Uppercase & Lowercase
        String upper = review.toUpperCase();
        String lower = review.toLowerCase();
        // Reverse text
        String reversed = new StringBuilder(review).reverse().toString();
        // Palindrome check
        String clean = review.replaceAll("\\s+", "").toLowerCase();
        String revClean = new StringBuilder(clean).reverse().toString();
        boolean isPalindrome = clean.equals(revClean);
        // Output
        System.out.println("\n--- Analysis Result ---");
        System.out.println("Character Count: " + charCount);
        System.out.println("Word Count: " + wordCount);
        System.out.println("Uppercase: " + upper);
        System.out.println("Lowercase: " + lower);
        System.out.println("Reversed Text: " + reversed);
        System.out.println("Palindrome: " + (isPalindrome ? "Yes" : "No"));

        sc.close();
    }
```

Output :



Apr 8 02:03
